GrocXpress – A Dynamic E-Commerce Website for Grocery and Electronics

Abstract:

GrocXpress is a full-featured e-commerce web application aimed at delivering a seamless and intuitive online shopping experience. The platform offers two primary product categories — Grocery and Electronics — enabling users to conveniently purchase essential and tech-related items from a single system.

The system Is developed using PHP for server-side scripting, MySQL for robust datamanagement, HTML and CSS for the layout and design, and JavaScript for real-time interactivity such as cart updates, form validations, and a smooth user interface. The application also integrates a payment gateway that allows secure transactions, displaying confirmation messages upon successful orders.

Tools & Technologies Used:

- Frontend: HTML, CSS, JavaScript, Bootstrap
- Backend: PHP
- Database: MySQL (phpMyAdmin)
- Web Server: XAMPP (Apache)
- Payment Integration: Razorpay (test mode)
